The secret:

Manfred Trenz has put a message in the machinecode from Enforcer. Load the game to the title and go with a program to the address "I 3460" and you can read the message.

```

Listen up folks, I Manfred Trenz the master, talk to you ! As you can see I'm still coding on the good old C-64 ! I started on this machine in 1984 and I will continue to work on it. This game is dedicated to all 64-User who are still waiting for good games. This game was coded in secret and midnight hours from Septembre 1991 to January 1992 with only 2-4 hours available in some few days per week. So coding was very hard, because nobody should see whats going on. Oh yes, I hear a lot of people ask why not a Turrican 3 ?? The answer is simple: Coding again a turrican game would not make fun because its always the same year by year. So I decided to code the unofficial second part of Katakis called Enforcer.
